The SI 68 can work together with Neopost mailing systems for ultimate one-step ease of use and productivity.

A Great Company

If your system isn't reliable, it isn't from Neopost. We set the standards for quality and durability. We're also the company who continually produces the most advanced mailing and shipping products available. With our Price Protection Program, we guarantee that your costs will not increase over the life of your contract. Equipment and service can be combined on one monthly or quarterly payment, and can even be set up to be paid automatically through our Neopost Automated Payment Plan.

Neopost SI 68 EZ Mailer 3

Friendly, flexible and efficient

Boost Your Productivity

In today's rapid business environment productivity is a constant concern. Yet, one area that can dramatically slow down the entire process is outgoing mail. Not only must documents, invoices, and mailings flow smoothly from your office to your customers, they must also go cleanly and professionally. Unfortunately, most automated inserting machines, which can help speed up this process, are too noisy, too difficult to run, or too large to fit into an office environment.

The solution? Introducing a quiet, compact, and easy to operate folder and inserter for the office – the Neopost SI 68. The SI 68 is smaller than most copiers and nearly as easy to use as a fax machine – anyone in the office can operate it. It is also so flexible – it can process just about any type of office mail, including invoices, statements, checks, letters, inserts, etc.

Viewing or customizing job settings is easy and convenient.

For occasional jobs choose Load N Go for automatic set-up.

The centralized control panel makes operation a breeze with pictographs, and one-touch selections.

Quiet and Easy Operation

SI 68's exclusive Load N Go feature makes operation a breeze. All settings such as fold type, fold length, envelope size, paper length and double document detection are set automatically! Just load the material, touch the button, and go! Neopost's SI 68 also includes nine completely programmable job settings for your reoccurring applications, reducing set-up time.

Flexible and Powerful

Every office needs to handle a wide variety of documents. Neopost's SI 68 comes with three feeders that can all handle almost anything you need. Invoices, reply envelopes, cards, and flyers can all be run on the versatile SI 68 EZ Mailer 3. With Neopost's exclusive FlexFeed®, each feeder is multi-functional and can automatically adjust to run non-folded or folded documents in nearly any combination.

The SI 68's PowerFold® exclusive folding system, can tri-fold up to five pages at one time. Even stapled sets can be easily folded and inserted using the daily mail feature. Operators can choose single, standard, Z fold or even the double parallel fold for legal size paper.

Tremendous Capacity

For a small machine, the SI 68 has tremendous capacity. The envelope hopper can be loaded with 250 envelopes and each document feeder can hold 325 sheets of paper. Neopost's FlexFeed® automatically adjusts for exactly what you want inserted and can feed single or multiple sheets. With SI 68's feeder swap mode, filling multiple feeders with the same documents can help attain maximum efficiency. When one feeder empties the other feeder starts automatically. This allows for a combined stacking capacity of up to 975 documents, which can be continuously processed. A conveyor stacker, side exit, or mail machine can be added to provide maximum operation efficiency.

Intelligent

The SI 68 saves you time and provides peace of mind in insertion integrity. With our Secure N Feed® feature every document is automatically checked for doubles by our patented thickness detection system, ensuring that you get exactly what you want in each envelope.

Add an Optical Mark Recognition module (OMR) for automatic processing of varying numbers of multiple page sets. With OMR, the SI 68 EZ Mailer 3 intelligently and professionally collates up to five documents that go together then folds and inserts the set. Automating this application can save many hours of tedious manual processing.

The SI 68's unique clam shell design provides easy and safe access to the entire paper path.

With Flexfeed®, feeders can handle many different paper types and sizes.

Optical Mark Recognition module (OMR) is available for grouping variable page sets of documents together automatically.
